**Abstract of CN1312158**

The production method of fibre composite moulded product is characterized by that it uses soft thin-layer product as facing material and uses glued fibre as core layer material, after both are compounded, they are hot-pressed and formed in the die equipment, then undergone the processes of die-cutting and surface treatment to obtain the invented fibre composite moulded product. It can produce thin-wall shaped product with large depth and large obliqueness, and is high in production efficiency, low in energy consumption, has no pollution, its product surface is smooth and clean, and is easy to be demoulded and degraded, can be extensively used for making various products, such as disposable tableware, sanitary articles, packaging containers, decorative moulded products, etc.
